Air Quality Model Guideline (AEP 2013):

1. Dispersion modelling of emissions from proposed facility
2. Dispersion modelling of emissions from other nearby industrial emission sources
3. Addition of baseline concentrations (“chemical concentrations from natural sources, nearby sources, and unidentified, possibly distant sources”)

- Validated, QA/QC'ed, continuous (preferred), 75% complete
- At least one year (most recent)
- Remove:
 - 0.1% highest concentrations for screening assessment
 - 10% highest concentrations for refined assessment
- Calculate averages greater than one hour if applicable

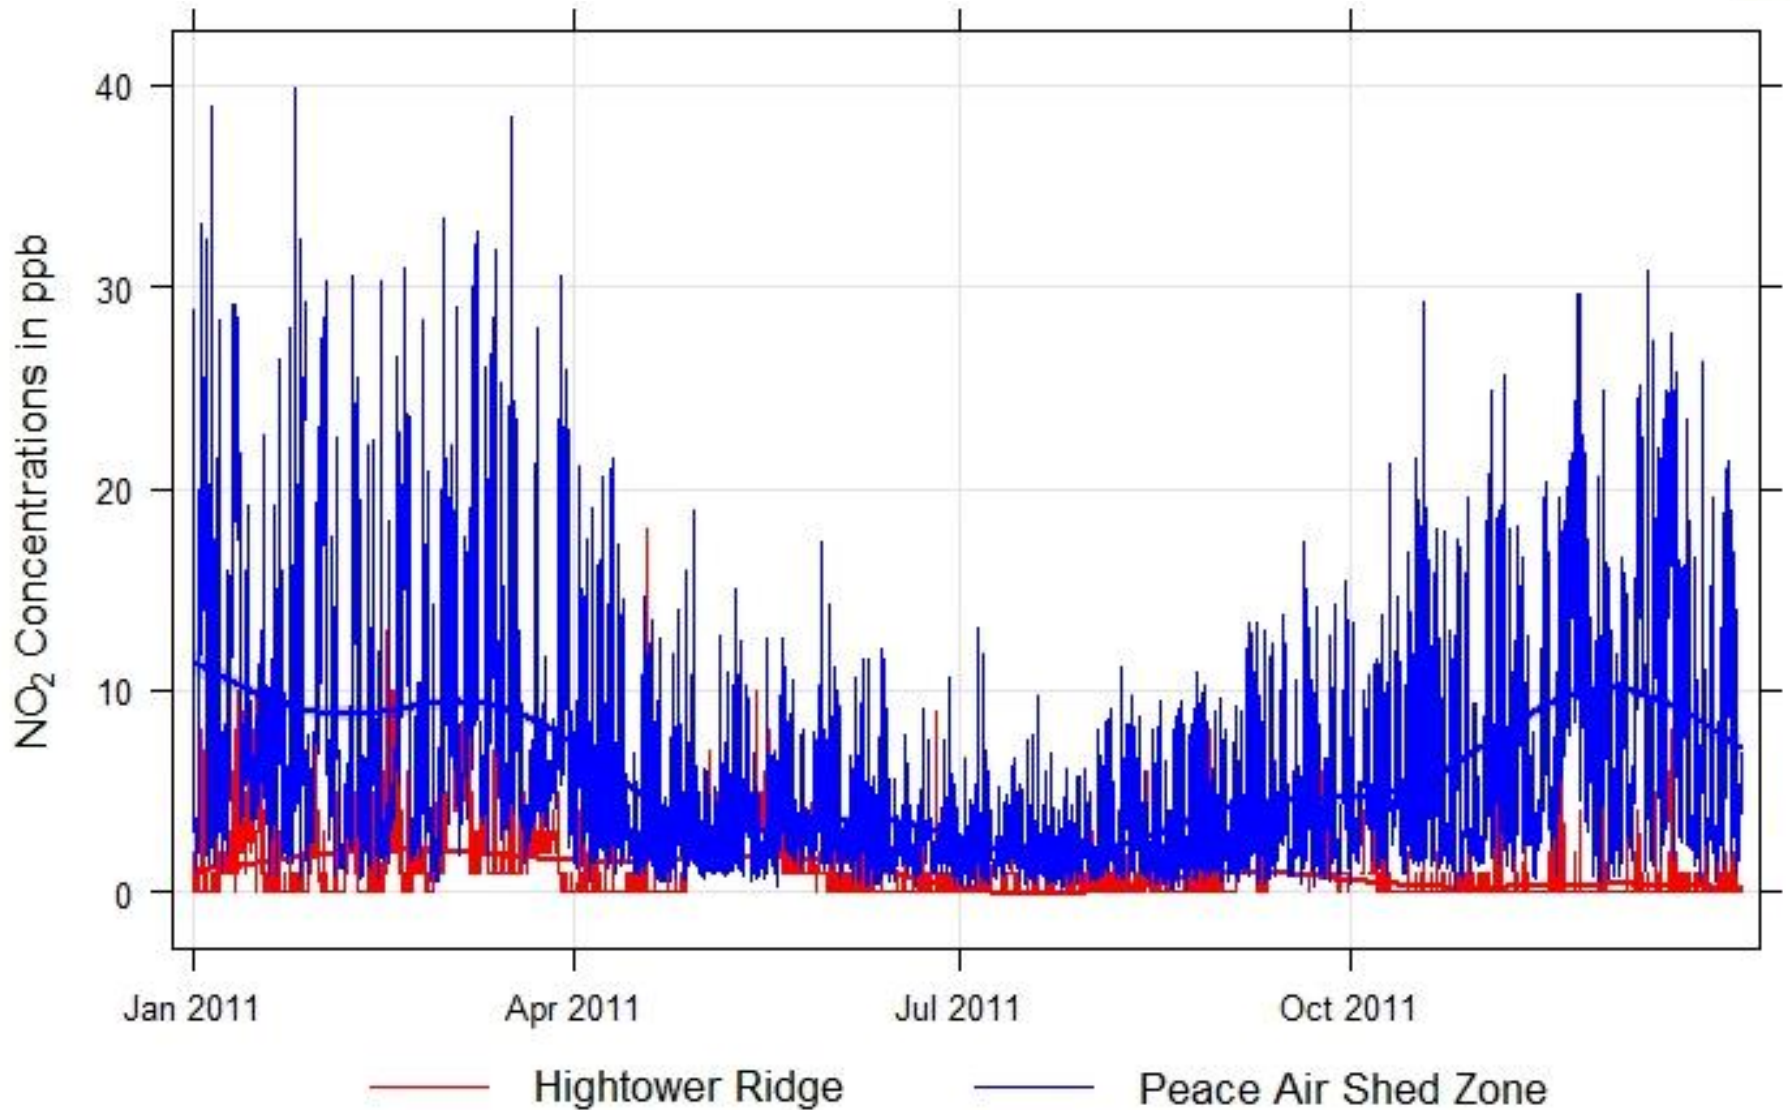

True Background Stations

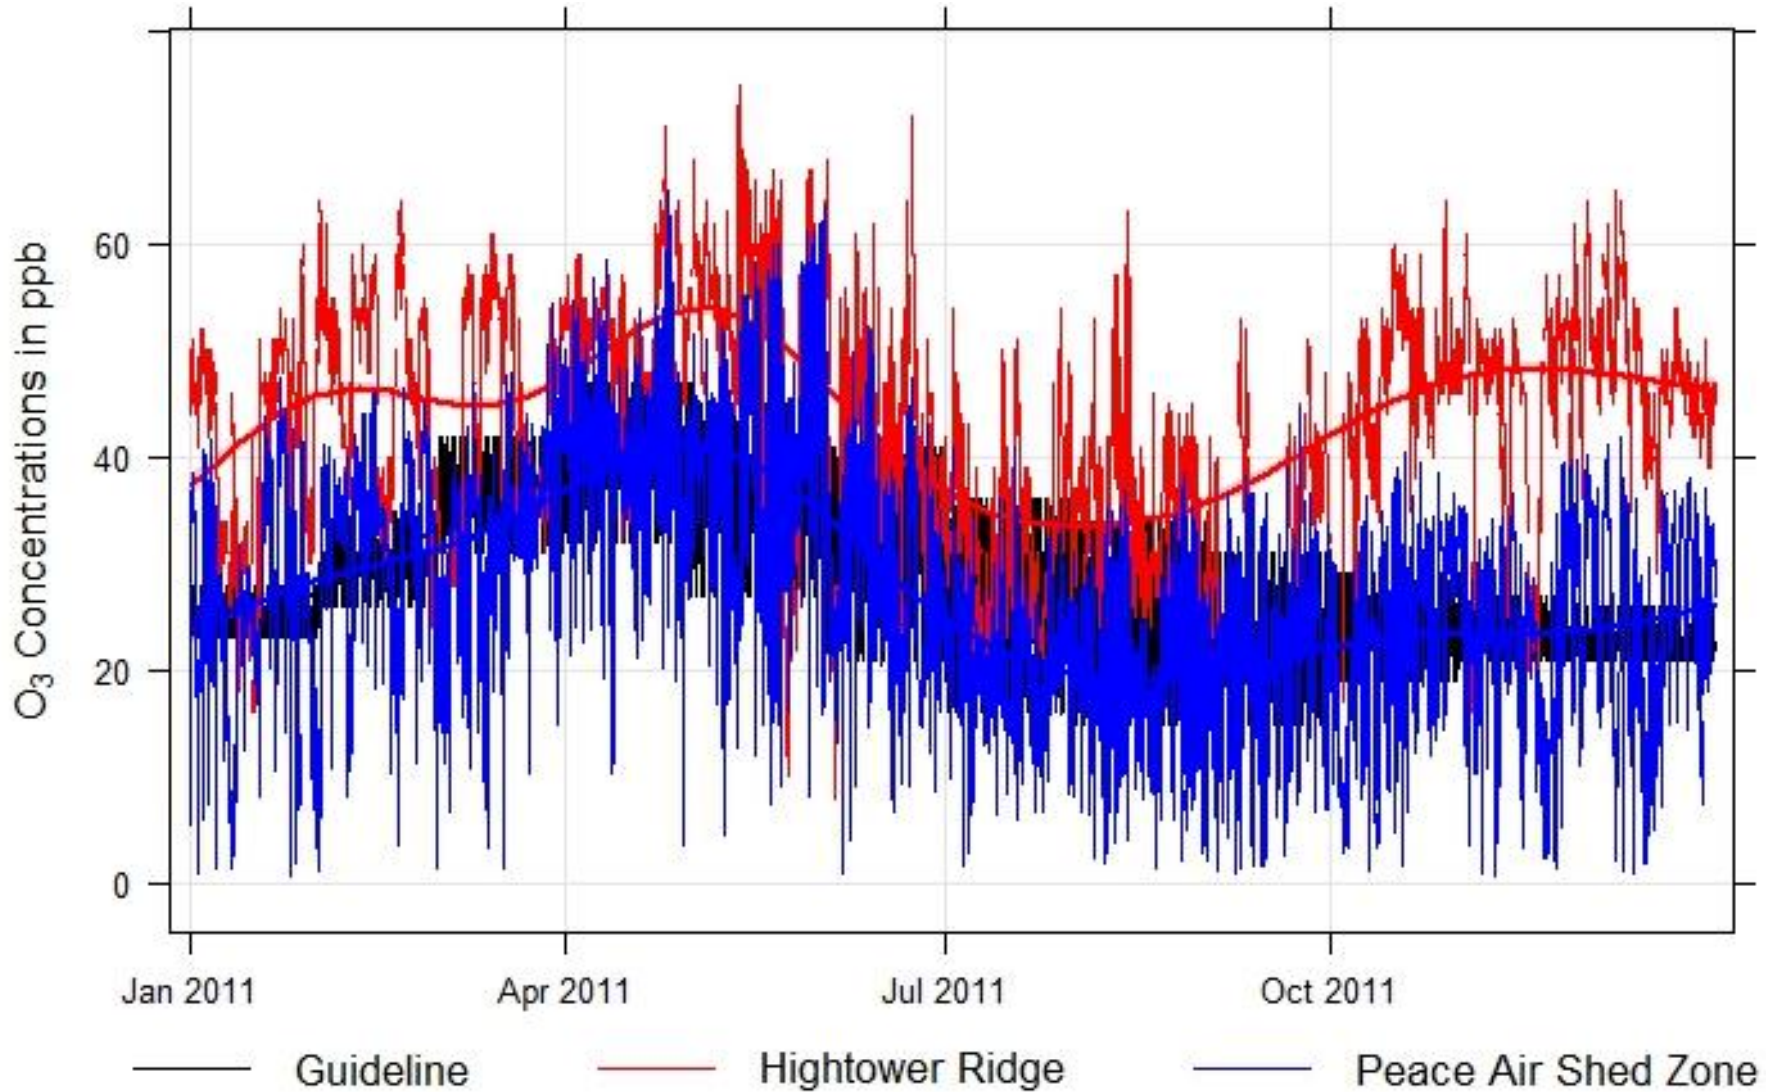

- Expensive and time consuming to maintain, because they are remote
- They do not protect anybody (presumably), therefore:
 - Sporadic
 - Constantly battling for survival
 - Tend to get shut down
- Unusual or extreme environment:
 - Sea salt, high elevation, etc.

Comparison: NO₂ at Hightower Ridge and Peace Air Shed Zone

Comparison: O₃ at Hightower Ridge and Peace Air Shed Zone

Recommended Rural Ozone Levels based on:

- Anzac
- Beaverlodge
- Caroline
- Elk Island
- Fort Chipewyan
- Genesee
- Tomahawk
- Violet Grove

GEOS-Chem v10-01:

- Global 3-D chemical transport model for atmospheric composition.
- Driven by meteorological input from the Goddard Earth Observing System (GEOS) of the NASA Global Modeling and Assimilation Office.
- “Grass-roots community model owned by its users”.
- Support teams at Harvard and Dalhousie Universities.

Aerosols:

- Volcanic SO₂ (1979 to 2009),
- Black and organic carbon (2001 & 2000)
- Non-volatile organic carbon (1990)
- Anthropogenic/biofuel emissions of OC and BC (1998)

Anthropogenic and biofuel:

- NO_x, CO, SO₂, and NH₃ (1970-2008)
- Volatile organic compound (2000)
- Biofuel (1985)
- Agricultural

Anthropogenic aircraft and ship:

- Aircraft emissions of fuel burned, NO, CO, and hydrocarbons (2005)
- Ship emissions of SO₂, CO₂, CO, NO (2008)

Biomass burning:

- Monthly-mean data from 1998-2014
- Daily and 3-hourly scale factors

Bromine:

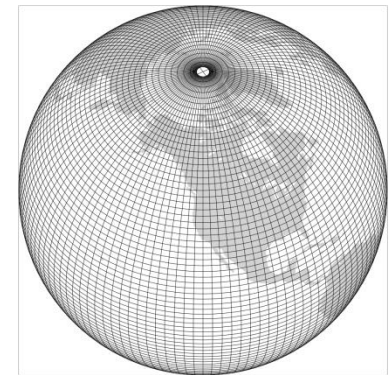

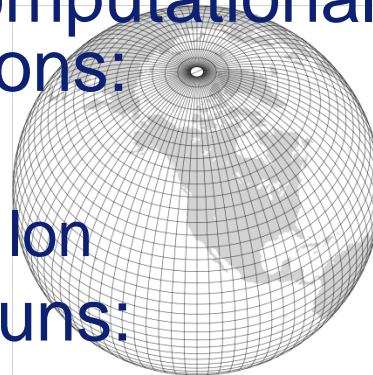

- Very short lived bromine species CHBr₃ and CH₂Br₂ (2000)

GEOS-Chem driven by GMAO assimilated meteorological data:

- 1-hour averaged quantities
- 0.5° lat x 0.667° lon, 72 vertical levels
- 3-hour averaged and instantaneous quantities
 - 10-m winds, roughness height, friction velocity
 - PBL height, column cloud fraction, surface temperature
 - Convective & total precipitation at ground

Met data regridded to reduce computational requirements for longer simulations:

- Global scale runs:
 - 4° lat x 5° lon and 2° lat x 2.5° lon
- Regional scale (nested grid) runs:
 - 0.5° lat x 0.667° lon

O3 at surface layer (ppbv)

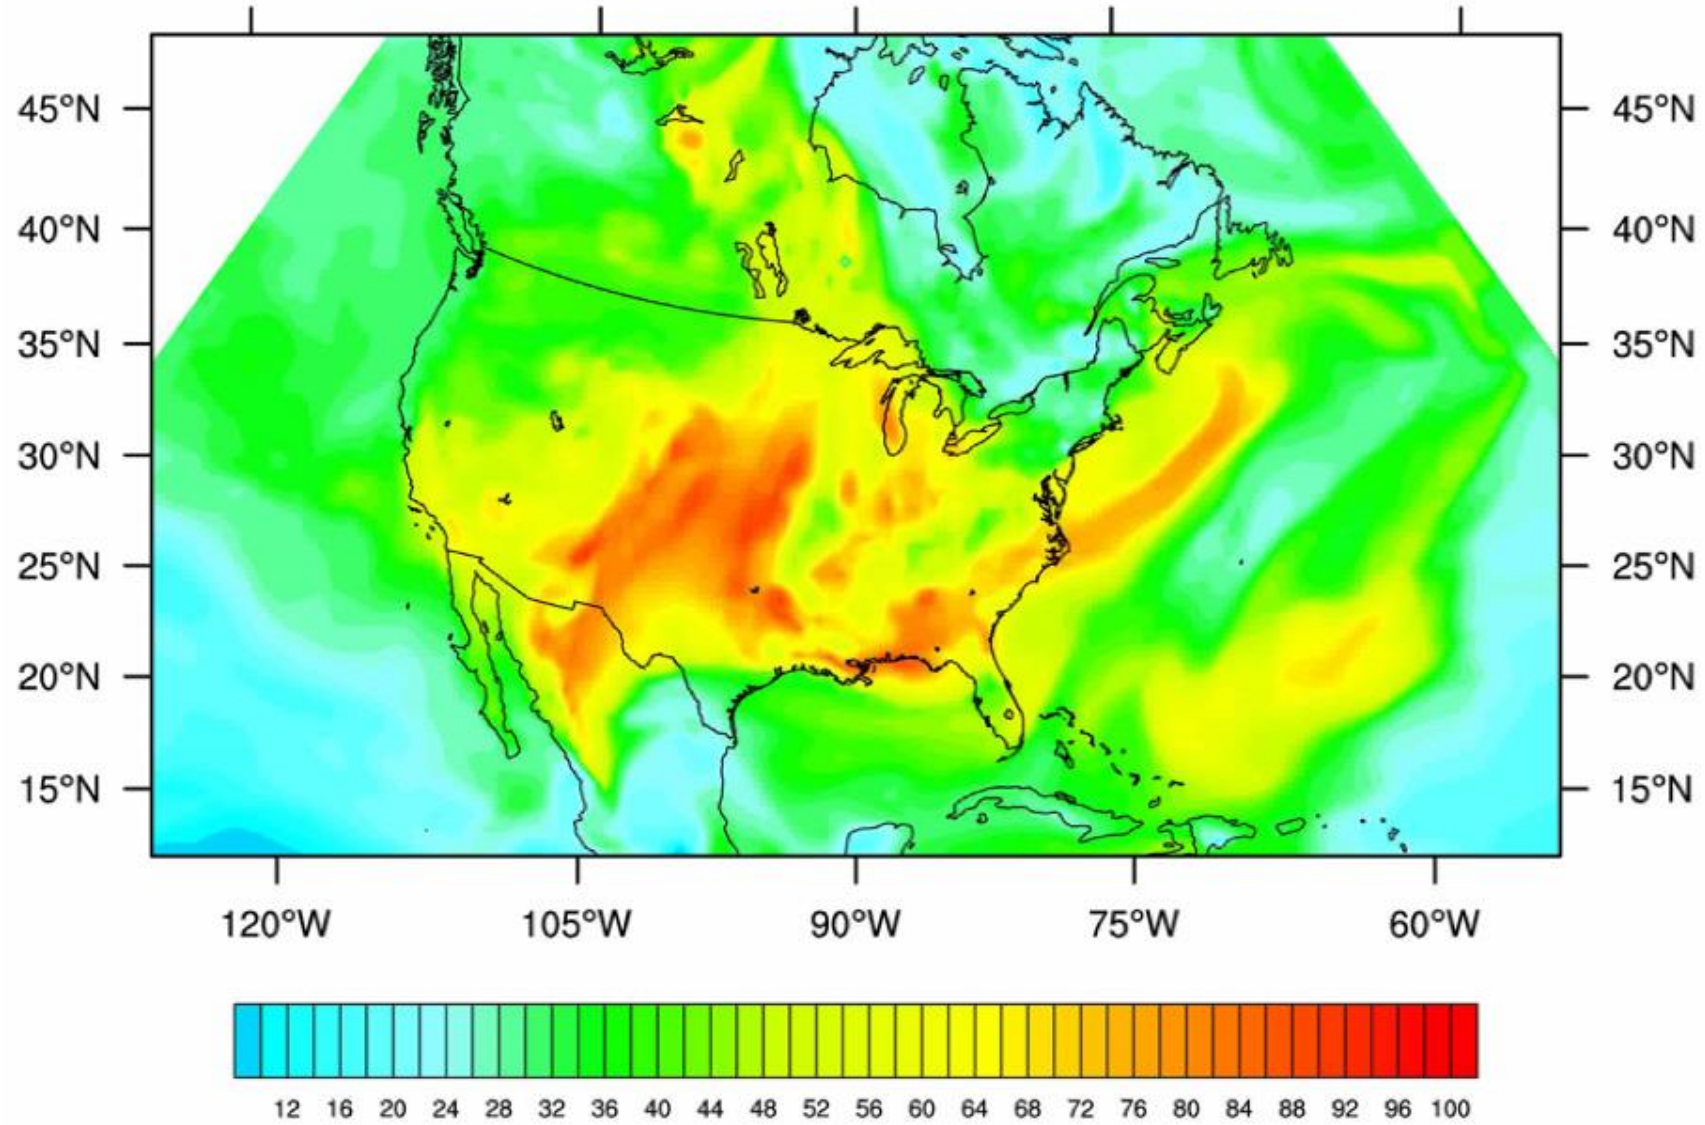

July 25, 2014: 00

0 3 6 9 12 15 18 21 24 27 30 33 36 39 42 45 48 51 54 57 60 63 66 69 72 75 78

Example of Fine Resolution Output: Movie

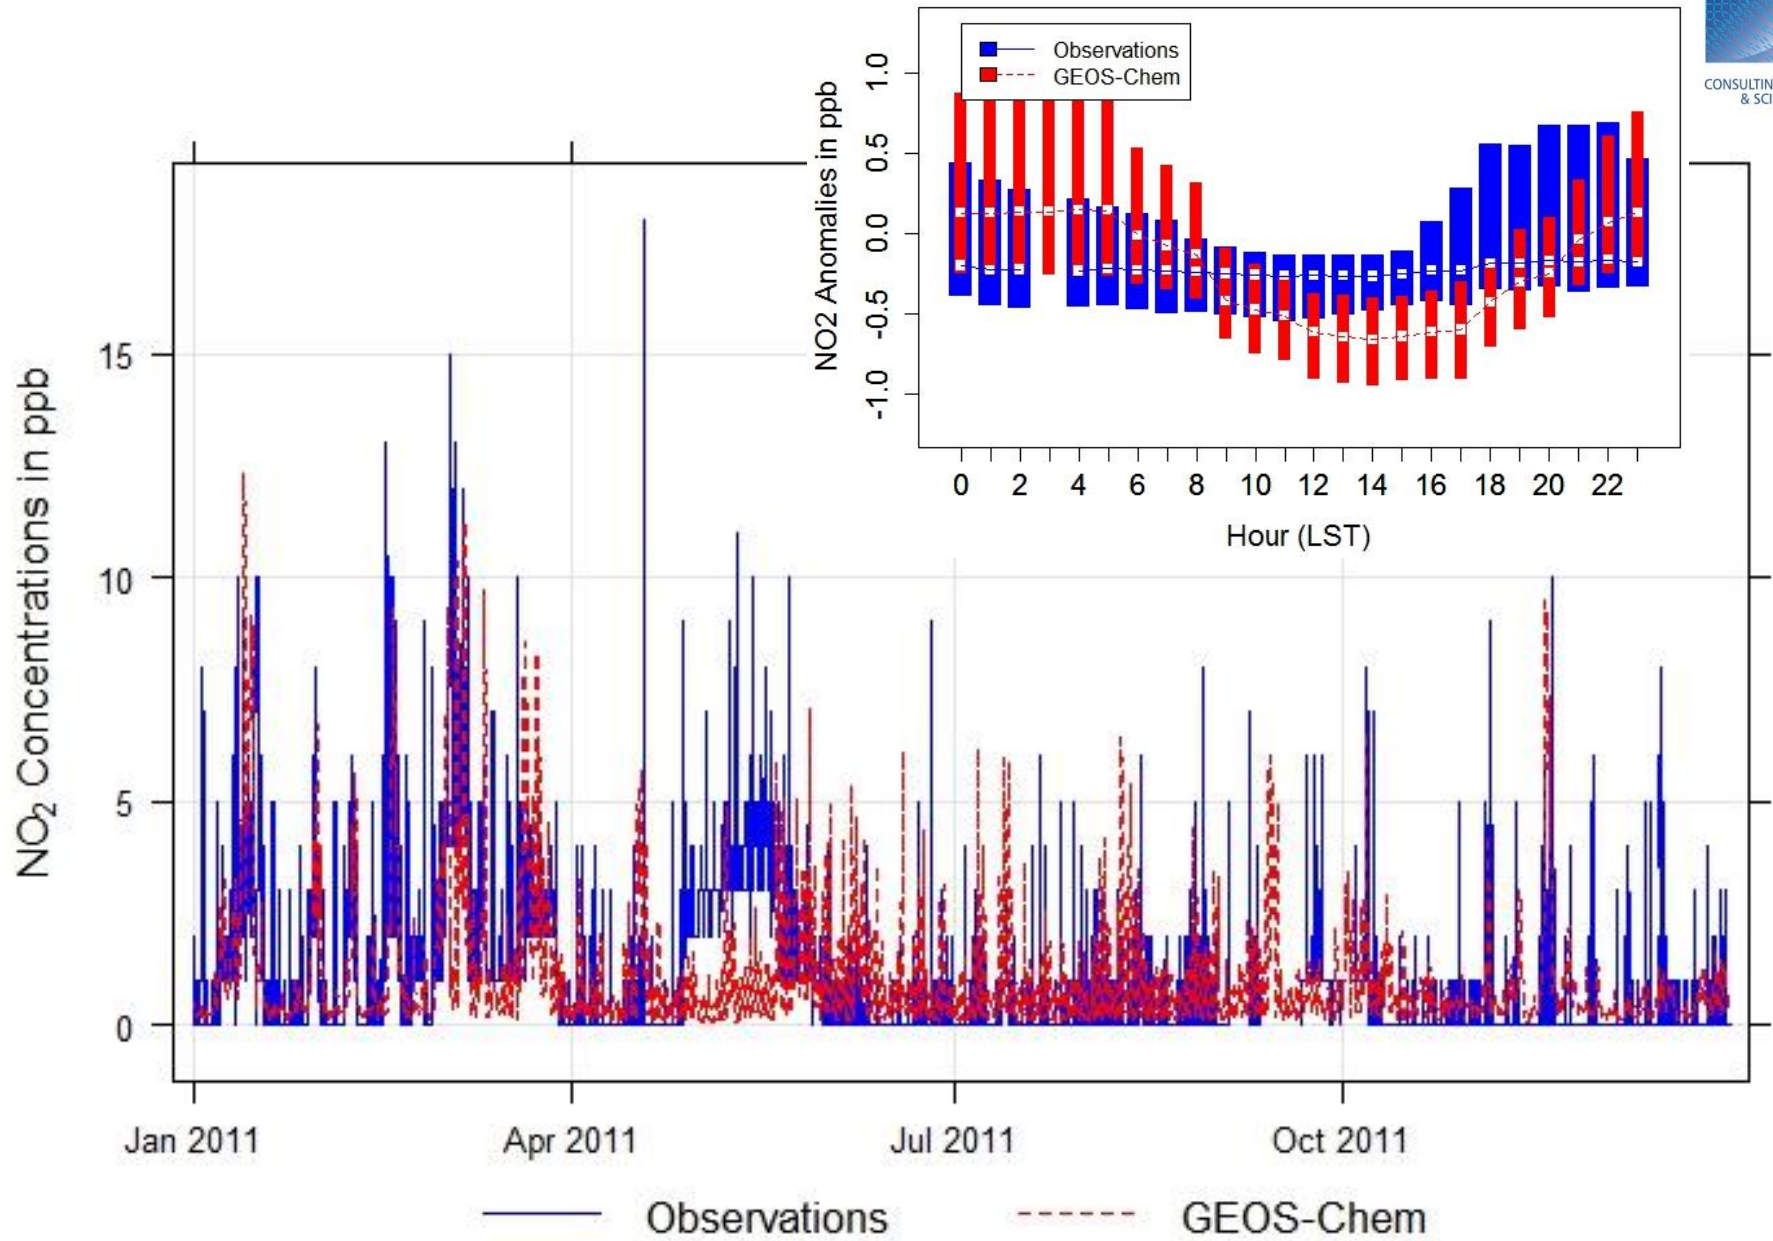

Ozone at surface layer (ppbv) July 01 2011: 00

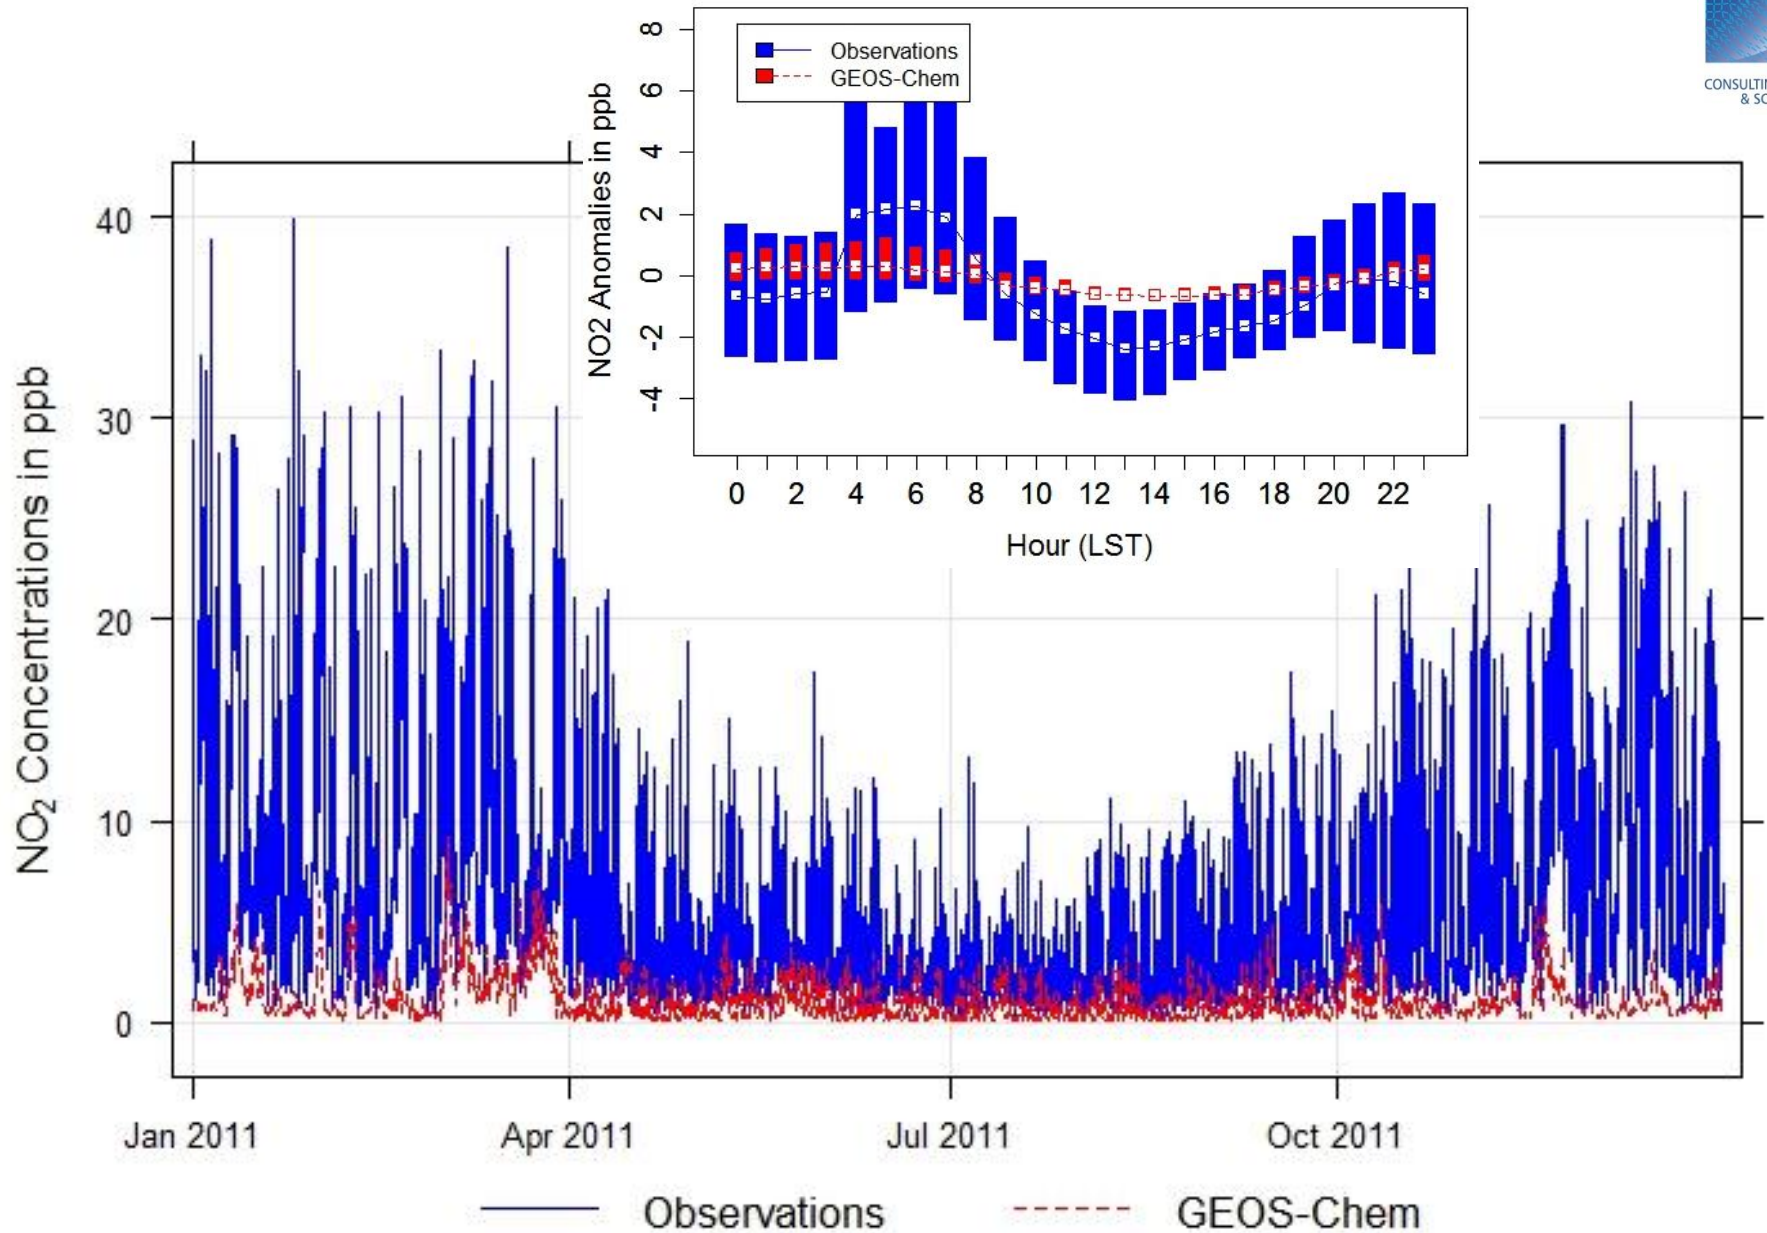

- 2011 1-hour averages for observations and GEOS-Chem
- GEOS-Chem output at fine resolution
- NO₂ and O₃
- Averages across Peace Air Shed Zone stations

- Emissions are homogenized within each Eulerian grid box.
- No small scale, local spikes in ambient concentrations.
- Chemistry has time to act (NO_x -to- NO_2 conversion, photochemistry, etc.).
- Representative of the average ambient concentrations in a typical regional study area.

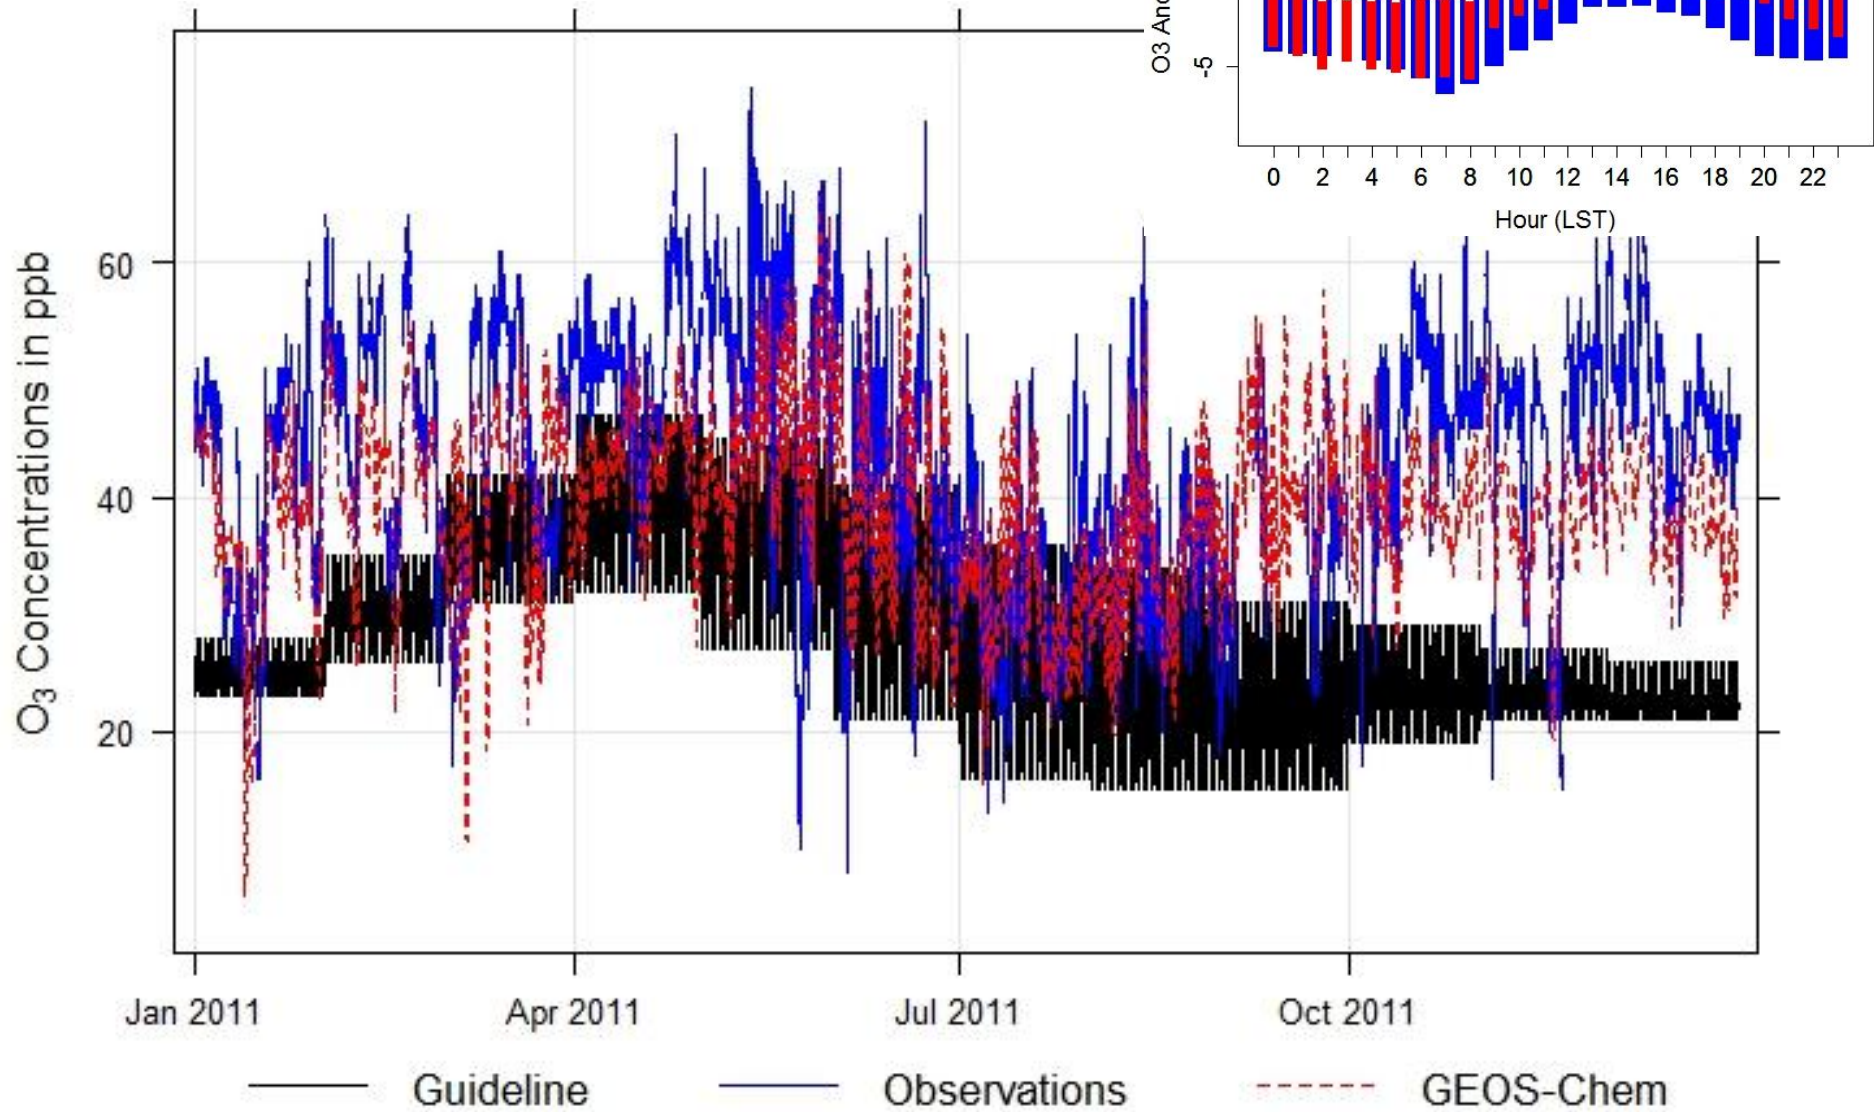

Observed and Modelled NO₂ at Hightower Ridge

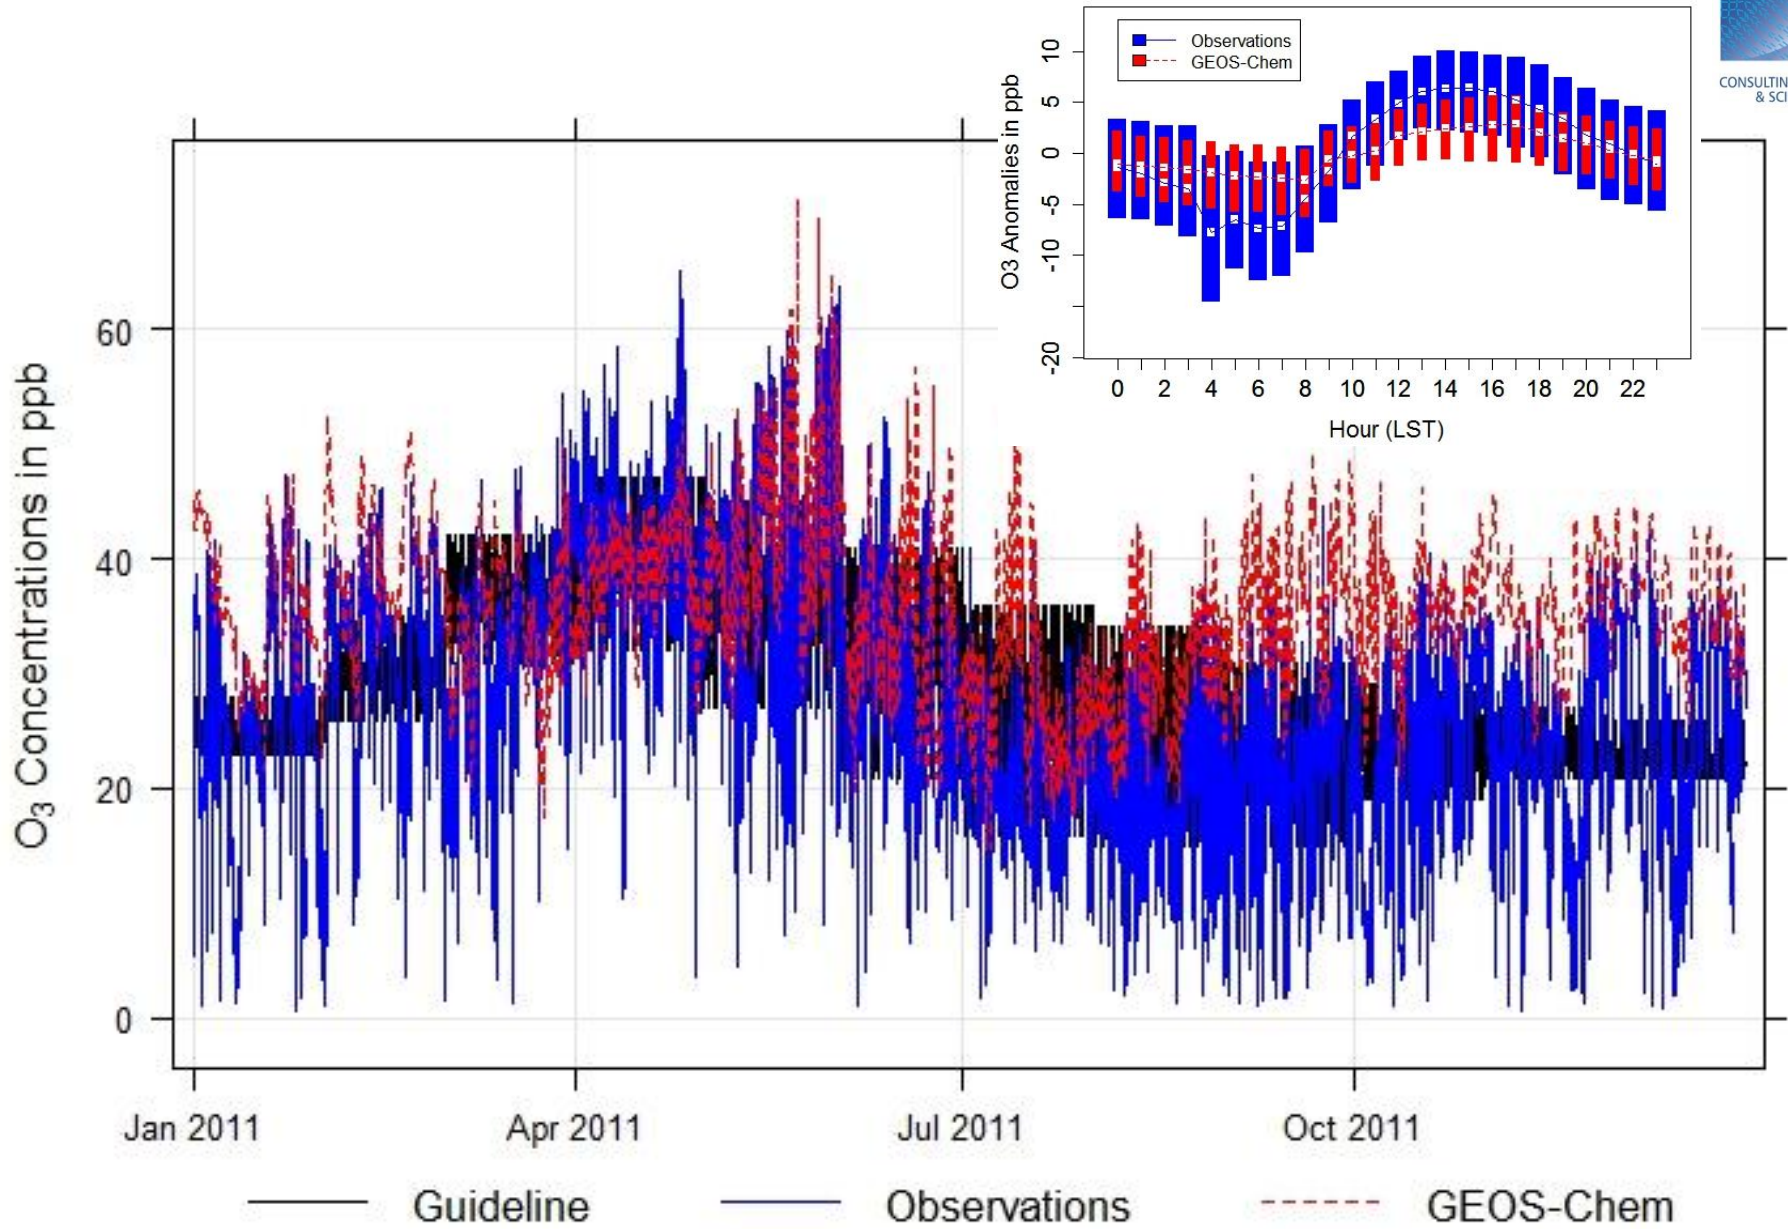

Observed and Modelled NO₂ at Peace Air Shed Zone

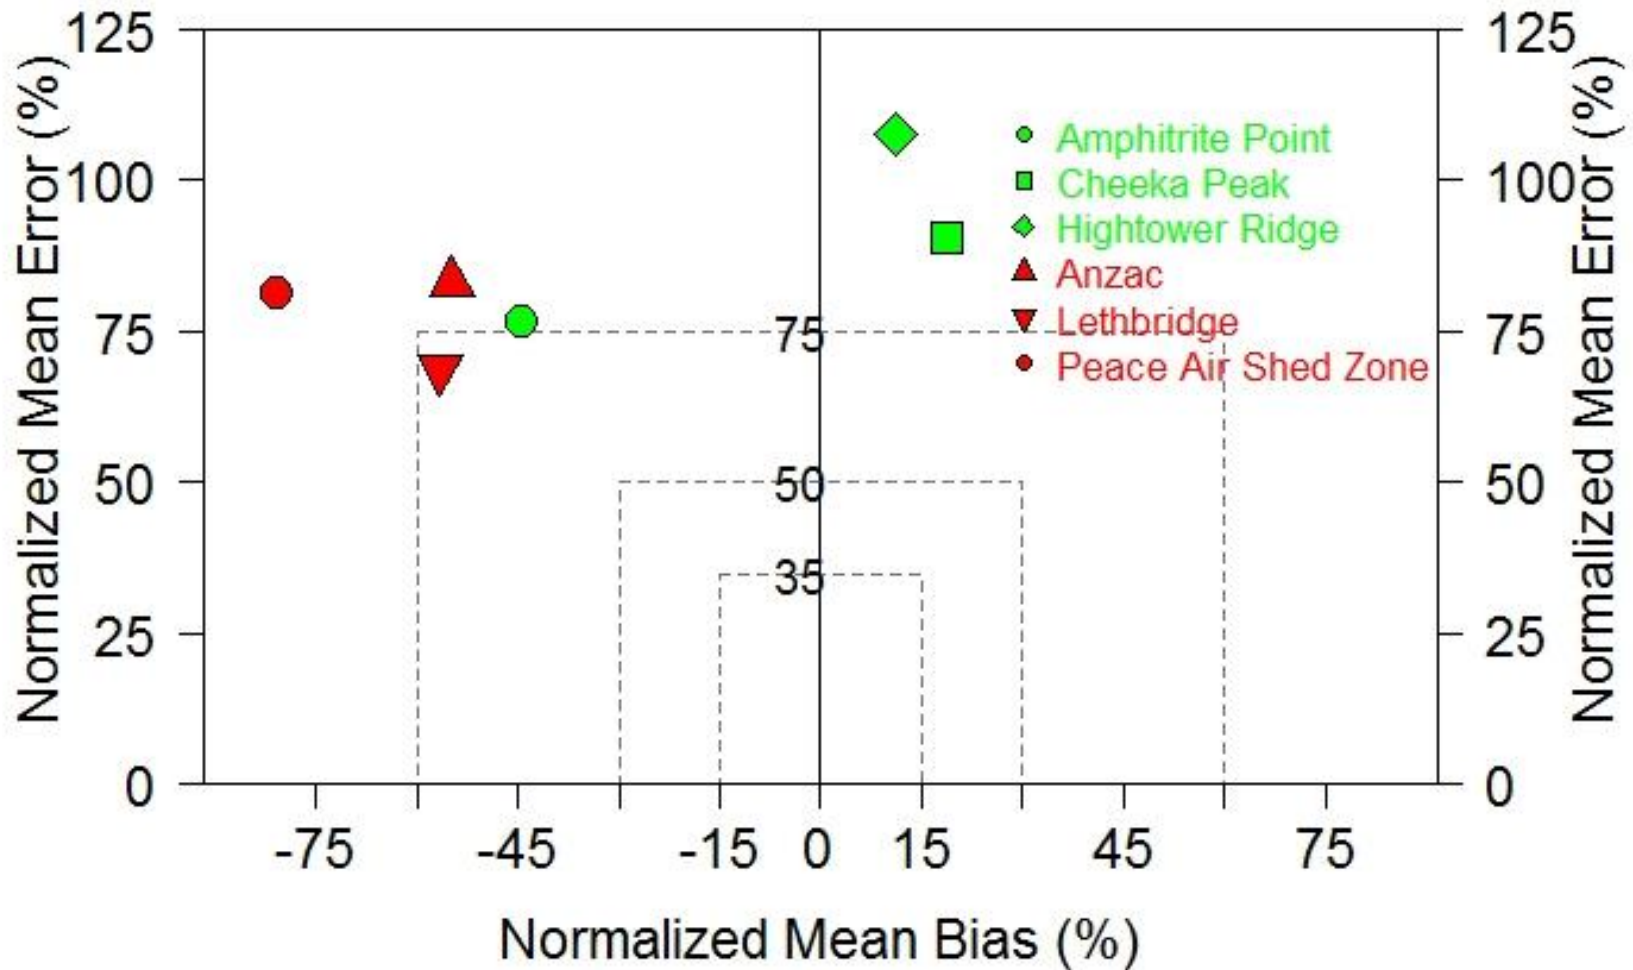

Observed and Modelled O₃ at Hightower Ridge

Observed and Modelled O₃ at Peace Air Shed Zone

GEOS-Chem averages emissions and chemistry over scales of order 10-100 km:

| Limitation: Does not capture local effects | Virtue: Not biased by local effects |
|---|---|
| Ozone depletion events at Amphitrite Point (McKendry et al. 2014) | Background for cumulative effects assessments |
| Photochemistry in Lower Fraser Valley | More realistic NO _x -to-NO ₂ conversion |
| | Improved boundary conditions for photochemical modelling |

We thank Mitacs for the postdoctoral funding provided to Zahra Hosseini and Dr. Ann-Lise Norman from the University of Calgary for collaborating with RWDI on this Mitacs internship
